That's probably moderate. I think that severe is when your head is re-shapen by the overhead.

According to the SFAR, you have extreme turbulence when your head hits the headliner, or in my case, when my son goes "wee, this is fun."

Like 150\$.

Va won't save you in turbulence, but if the ship is rated in the normal category than I know what Gs I can tolerate. Cheap and easy piece of mind.

Lol@"unusual attitude recovery".
